UVALUX INTELLIGENCE PLATFORM · PHASE 1

You already had the answer. Here is what *UVALUX lost.*

Twelve years of one real salon group's sales history, **provided by UVALUX** — four trading locations, 20,299 customers, 444,327 tanning sessions. They spent $433,333 on product. More than three quarters of it was brands UVALUX sells. Then they slid for five years and closed. Every warning sign was sitting in their own data.

Why this matters to UVALUX, not just to the salon

A supplier sees purchase orders. When orders drop, you know something is wrong, but not what. This data shows you what.

$433,333	77.7%	$33,123	$0
product this group sold, 2009–2022	of it was UVALUX brands ($336,638)	wholesale value of this account at its best year	what it is worth today — they closed

> Their top sellers were **Australian Gold ($185,497)**, Supre ($48,571), Swedish Beauty ($32,448), Designer Skin ($31,591) and California Tan ($27,289). This was a UVALUX kind of account, buying UVALUX kinds of products.

The part a purchase order cannot tell you

Between 2017 and 2019 this group lost 13% of its visits. That alone is bad but survivable. In the same two years, sales of UVALUX-brand product fell **37%** — almost three times faster.

	2017	2019	CHANGE
Visits	50,800	43,966	−13%
Customers who came at all	5,242	4,344	−17%
UVALUX-brand product sold	$49,684	$31,110	**−37%**
Product sold per visit	$0.98	$0.71	**−28%**

THE OPPORTUNITY

They kept most of their customers and **stopped selling them things**. That is not a traffic problem — it is a selling problem, and a selling problem can be fixed with coaching. Nobody saw it because nobody was looking at product-per-visit. The platform looks at it every day.

The data, and what stands out in it

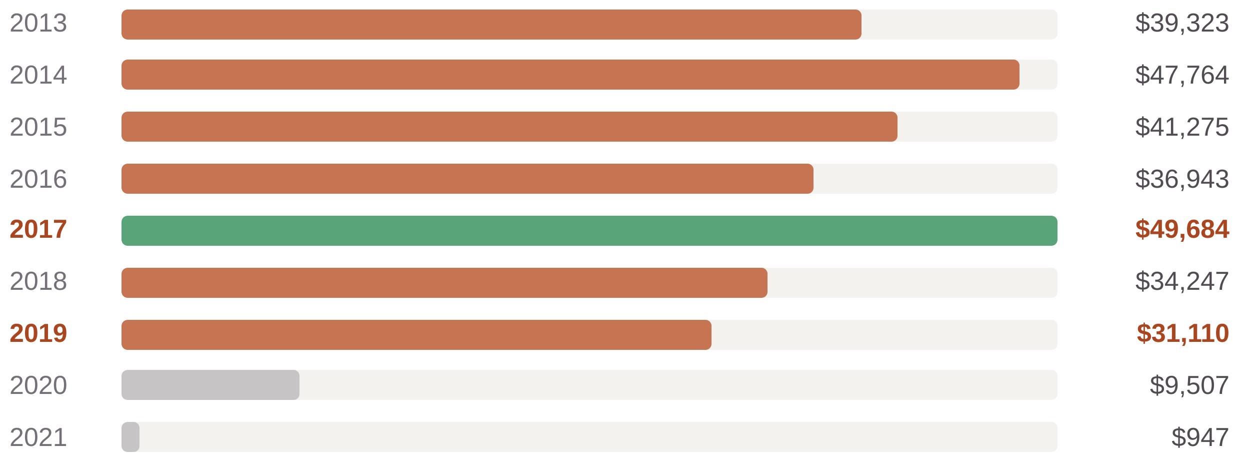
Everything below came out of their own point-of-sale database. Nothing is estimated or filled in.

4 salons — Toronto, Woodbridge, Bolton, Vaughan	20,299 customers	444,327 tanning sessions	155,352 register lines

121,996	34	101	673
payments	beds	staff records	products

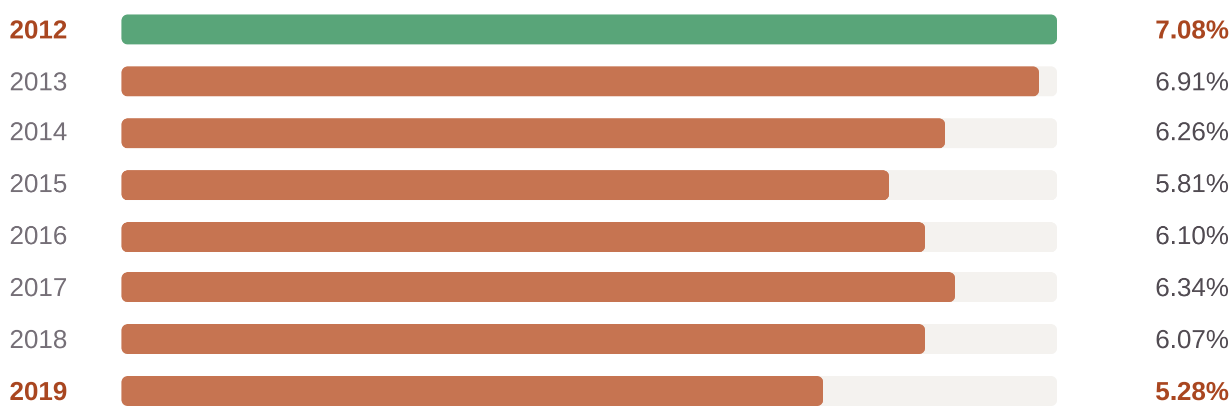
UVALUX-brand product sold, by year

Peaks in 2017, then falls for two straight years before COVID ever arrives.



Share of visits that bought a product

This is the number that decides how much product a salon moves. It drifted down from 7.1% to 5.3% over seven years and nobody was watching it.



OPPORTUNITY 1 · THE FOUR SALONS ARE NOT EQUAL

Same owner, same products, same year. One salon sold product on **8.61%** of visits. The other three sold on about **4.5%**. Whatever the good one does, the others do not.

SALON	VISITS, 2019	BOUGHT PRODUCT	WORTH PER YEAR IF IT MATCHED THE BEST ONE
Salon 3 — the benchmark	8,027	**8.61%**	—
Salon 1	17,772	4.57%	**$10,151**
Salon 2	12,725	4.57%	**$7,274**
Salon 4	3,917	4.06%	**$2,520**
Total, per year			**$19,945**

OPPORTUNITY 2 · WE TESTED THE STAFF, AND IT DID NOT HOLD

We expected to find the same gap between people that we found between salons. We did not. Recomputed per salon, the spread between front-desk staff inside the same location is **under 1.4 points** — Salon A runs 4.35% to 4.58%, Salon B 3.61% to 4.50%. The apparent "best staffer" only looks strong because they work at the strongest *salon*. Bringing everyone up to their own location's best person is worth about **$900 a year**, not the thousands a raw best-versus-worst comparison suggests. **We are showing you this because we checked it and it failed.** The gap between salons is real; the gap between people, in this group, is not.

OPPORTUNITY 3 · CUSTOMERS DRIFT OFF, THEN QUIETLY COME BACK

We looked at every time a customer went 30 days without visiting — 62,764 of them — and nobody ever called them. **71% came back on their own, but it took 207 days on average.** The other 29% never came back at all. Seven months of nothing, from a customer who was going to return anyway.

DAYS SINCE THEIR LAST VISIT	HOW MANY	CAME BACK ALONE	DAYS IT TOOK
30 days quiet	62,764	71.2%	207
60 days quiet	47,633	62.9%	289
90 days quiet	40,786	57.5%	349
One year quiet	20,740	29.1%	791

A returning customer spends **$90.88** over their next six months. That is what each of those quiet stretches is costing, and what a text message is worth.

Where the money number comes from

Two things we measured, and two things we guessed. We are labelling which is which so you can argue with the guesses.

MEASURED Weaker salons brought up to the best one	$19,945/yr
MEASURED Weaker staff brought up to their own salon's best	$912/yr
Total gap sitting in this group's own numbers	**$20,857/yr**

Those two figures are arithmetic on their sales records. No opinion in them. The target is not an industry average we imported — it is **the best salon in their own group and the best person in their own shop.** Somebody there already does this well.

MEASURED	UVALUX brands were this share of product sold	77.7%
MEASURED	So the gap in UVALUX-brand retail is	$20,964/yr
MEASURED	At wholesale (retail ÷ 1.5)	$13,976/yr
Per salon, per year		**$3,494**

GUESS	Share of that gap actually captured — low	25%
GUESS	Share of that gap actually captured — high	60%

> **These two percentages are ours, not the data's.** Nothing measured supports them. Software does not close a performance gap — people do, with coaching, over time. We picked a quarter as a cautious floor. **If you think that is wrong, change it and the whole page changes with it.** That is the honest state of this number.

What it comes to

CAUTIOUS

$262,000

extra wholesale per year, across ~300 salons ($873 per salon)

IF IT GOES WELL

$629,000

extra wholesale per year, across ~300 salons ($2,096 per salon)

That is additional product demand from salons you already sell to. It is not a subscription fee and it does not depend on charging anyone more.

And the bigger number, which we have not counted at all

This account was worth about **$33,000 a year in wholesale at its peak**. It went to zero. If the platform keeps even a handful of your 300 accounts from sliding the way this one did, that is worth more than everything above — but we are not going to put a figure on it, because we cannot measure a closure that did not happen.

What we deliberately left out

NOT COUNTED	WHY NOT
The 71% who come back on their own	Getting them back in three weeks instead of seven months is worth real money. We counted none of it.
Customers moving up to unlimited	Their spending doubles around an upgrade ($7.07 → $13.39). But they were already ramping up beforehand, so we will not claim the upgrade caused it.
Empty bed time, equipment, stock	Real opportunities we cannot price honestly from this data.

How the platform actually does this

Eight steps. The middle one is the part nobody else can copy.

STEP	WHAT HAPPENS	WHERE IT STANDS
1 · Get the data	Read the salon's existing till system. No new hardware, no new habits.	Done — 194,672 visits loaded and checked, from a 2008 system nobody supports any more
2 · Do the arithmetic	Work out attachment, per-visit spend, who is quiet, who is slipping. Plain maths, not AI.	Done

3 · Spot what matters today	Decide which fact is worth an owner's attention this morning, and what it is worth in dollars.	Done — the three opportunities above are its output
4 · Look up what UVALUX knows	Find the coaching UVALUX has already recorded about that exact problem.	**13½ hours of your expo audio, mined into 224 pieces of advice, each tied to the exact recording and timestamp**
5 · Write it in plain words	AI turns a verified fact plus your coaching into a sentence an owner understands. The AI never invents the numbers.	Built
6 · Give them the action	Not a chart — a text to send, a script to use, a two-week challenge to run.	Built
7 · They do it	One button.	Built
8 · Measure what changed	Re-check the same number afterward against where it started.	Needs the pilot — this is what Phase 1 proves

> **Step 4 is the whole argument.** Anyone can build steps 1, 2 and 3 — it is just arithmetic. Only UVALUX has thirty years of coaching recordings. The platform turns that archive into something that answers a specific salon on a specific morning, instead of sitting on a hard drive.

Where your coaching is strong, and where it is empty

We checked all 224 pieces of advice against the problems the platform can spot:

PROBLEM THE PLATFORM FINDS	ADVICE AVAILABLE	READY TO USE AS-IS
Product not selling	31	**17**
Stock and product mix	33	**14**
One staff member behind the others	8	**7**
Moving someone to unlimited	28	6

Keeping a member from leaving	20	3
Quiet times of day	5	2
Winning back a customer who drifted off	**0**	**0**

> We are showing you the empty row on purpose. **The single biggest thing the platform can find in this data — 13,807 customers who went quiet — is the one thing your recordings say nothing about.** One coaching session on win-back, recorded once, fixes that for every salon at the same time.

This gets better every month, and here is exactly how

Most software is as good on day one as it will ever be. This is the opposite: three things feed it, and each one makes every salon's advice sharper.

1 · More salons make the comparisons real

Today the best benchmark we can offer a salon is *its own best location*. That is honest, but it is a small yardstick. Put twenty salons in and it becomes a real peer group. Put in the ones you already sell to and it becomes something nobody else in the industry can produce.

SALONS IN THE SYSTEM	WHAT THE PLATFORM CAN TELL AN OWNER
1 group (today)	"Your Bolton shop sells product on half as many visits as your Toronto shop."
~20 salons	"You are in the bottom quarter for product per visit, and here is what the top quarter does differently."
~300 salons	"July is normally down 12% everywhere — yours is down 31%, so this is not the season, it is something you can fix."

> That last row is the one you cannot buy anywhere. **With one salon you cannot tell a bad month from a normal summer.** With three hundred you can, and every owner stops guessing about seasonality forever.

2 · Your old recordings are worth more than they look

We put 13½ hours of expo audio through the system. It produced **224 pieces of advice**, each tied to the exact recording and timestamp so nothing is paraphrased or invented.

WHAT CAME OUT OF 13½ HOURS	PIECES	SHARE
Ready to use in a recommendation as-is	28	13%
Useful once someone words it	20	9%
General principle — true, but nothing to act on	172	78%

About **3.6 usable pieces per hour** of recording. That is not a criticism of the material — it was recorded to fill a room, not to answer a specific salon on a Tuesday morning. UVALUX has decades of this. We have processed one event.

3 · Short, targeted interviews are worth far more than old tape

This is the part that changed after we ran the analysis. **We can now name precisely what is missing.** Before, "record more coaching" was a vague request. Now it is a shopping list, because we know which problems the platform can spot and has nothing to say about.

GAP WE CAN NOW NAME	WHAT WE WOULD ASK A COACH ON CAMERA	TIME
Winning back a quiet customer — 13,807 of them in this one group, zero advice in the archive	"Someone has not been in for 60 days. What does the front desk actually say when they call?"	30 min

Moving someone to unlimited — 28 pieces, but only 6 usable	"Walk me through the exact conversation, from the sentence that opens it."	30 min
Keeping a member from cancelling — 20 pieces, only 3 usable	"They say they are pausing for summer. What are the next three sentences?"	30 min
Quiet afternoons — only 5 pieces total	"Tuesday at 2pm is dead. What offer works and what offer cheapens the brand?"	20 min

WHY THIS IS SUCH GOOD VALUE

Old recordings run about **3.6 usable pieces an hour** because most of a seminar is context and stories. An interview aimed at a question the platform already knows it cannot answer should land most of what is said. **Roughly two hours of a coach's time, filmed once, closes every gap in the table above — for all 300 salons at the same time.**

4 · Every action that gets run teaches the system

When a salon takes a recommendation and the number moves afterward, that is new evidence nobody had to record. After enough of them the platform stops saying "UVALUX coaching suggests this" and starts saying:

> **"Eleven salons with your exact pattern ran this. Seven saw product per visit rise, most within a month."**

That is a kind of advice that cannot be copied by a competitor, because it only exists if you have the salons, the coaching and the outcomes in one place. UVALUX is the only company that has all three.

One thing we tested that did not hold up

Adding modalities did not make customers stay longer — in this data

The idea that adding a modality keeps customers longer is the reason to buy new equipment. We tried to prove it here and could not.

At first it looks obvious: customers who used one type of bed stayed 10.6 months, and those who used four or more stayed 55.1 months. **But that is the wrong way round.** Someone who sticks around for 55 months has years of chances to try four different beds. Staying longer causes the variety, not the other way about.

So we tested it properly. We looked only at what a customer tried in their *first five visits*, then measured how long they stayed *after that* — so the answer cannot cause the question:

WHAT THEY TRIED IN THEIR FIRST FIVE VISITS	CUSTOMERS	MONTHS THEY STAYED AFTERWARD
Sunbeds only	7,872	**31.80**
Also tried spray tan or red light	652	**31.89**

Why we are telling you this instead of the flattering version: this salon barely sold modalities — spray and red light were 3% of everything they did. It is a weak test, not proof the idea is wrong. But it is exactly the sort of assumption this platform exists to check, and it is far better to find out here than to have a partner pull it apart later.

What we need from you

1. **What counts as a good attachment rate?**

   We can compare a salon to its own best person and to the others in its group. We cannot tell them whether 5.3% is normal or terrible for the industry. You know that number and it would sharpen every recommendation we make.

2. **About two hours of coach time, on camera.**

   Four short interviews against the gaps listed above, starting with winning back quiet customers — the biggest opportunity in the data and the one place your archive says nothing. Filmed once, it answers for every salon at the same time.

3. **Access to more of the old recordings.**

   We have processed one event. Every extra hour adds coverage, and it costs nothing but the files.

4. **Three to five friendly salons for the pilot.**

   Not for the software — for the comparisons. Benchmarks and seasonal patterns need more than one operator before they mean anything.

5. **What you mean by "modality".**

   Then we can re-run the tenure test properly, in an afternoon.

Goes with `PROPOSAL-PHASE1-UVALUX.md`. All figures come from one real independent salon group's till system, obtained with the owner's permission and stripped of names — no customer, staff member or business is identified here or inside the platform. Wholesale figures use retail ÷ 1.5.
